## OBSERVATIONS

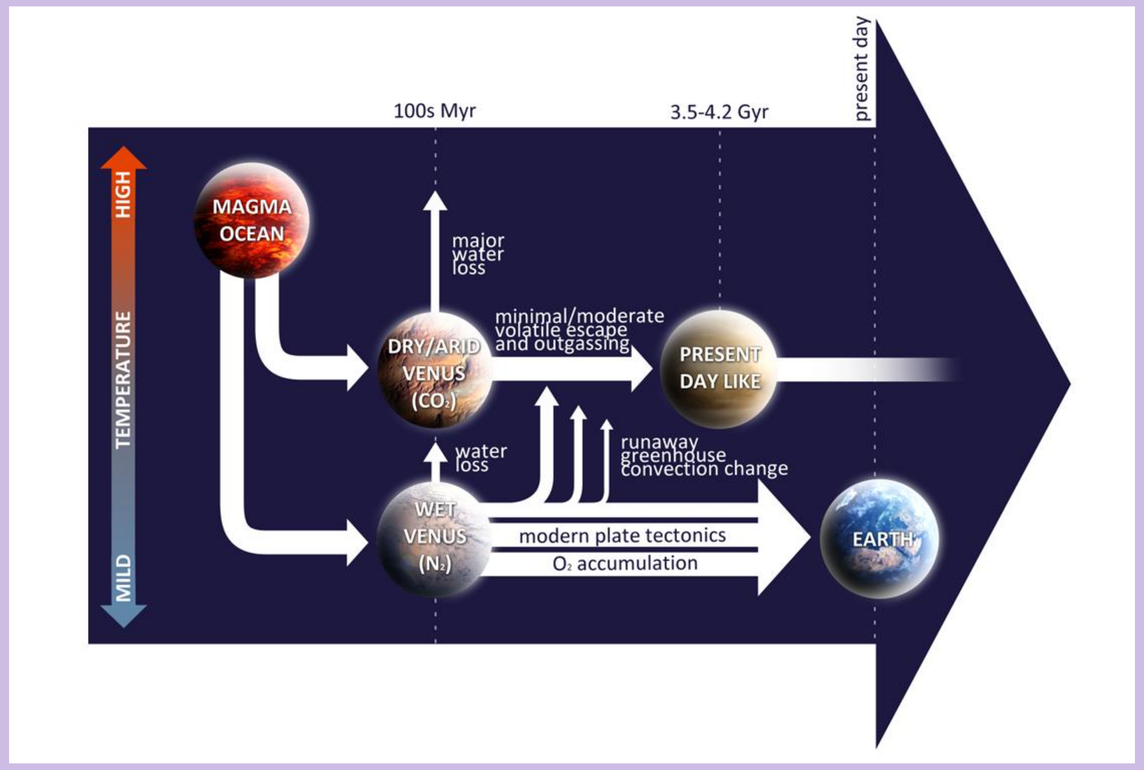
- Lorem ipsum odor amet, consectetuer adipiscing elit.

## EVOLUTION

- Lorem ipsum odor amet, consectetuer adipiscing elit.

## TECTONIC PLATES

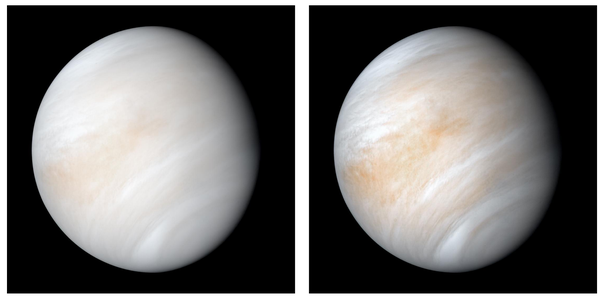
- Lorem ipsum odor amet, consectetuer adipiscing elit.



- From Gillmann et al. (2022), shows different potential paths a planet could take to evolving from a magma ocean into either a Venus like planet or into an Earth like planet.

## HABITABILITY

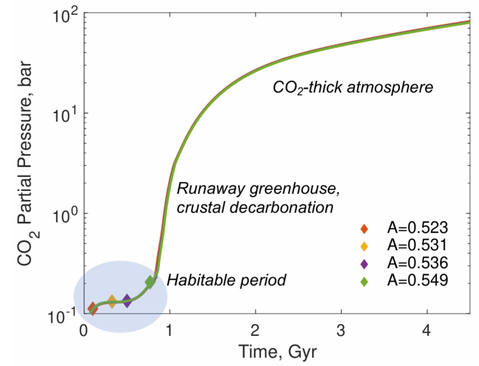
- Lorem ipsum odor amet, consectetuer adipiscing elit.



Images of Venus taken from the NASA Mariner Mission, combining orange and ultraviolet filter images

## GREENHOUSE EFFECT

- Lorem ipsum odor amet, consectetuer adipiscing elit.



From Gillmann et al. (2022), shows the habitability period and how the runaway greenhouse increased the carbon dioxide pressure in the atmosphere
